

You CAN Be a Great Math Teacher

based on work of Joan A. Cotter, Ph.D.

Teaching Math

- Do you struggle with math?
What curriculum do you choose to avoid the same fate for your child?
- Maybe you are good in math?
Yet you're unsure how to teach it?
- Should you include manipulatives? Or not?
Which manipulatives do you choose?
What in the world do you do with them?

Teaching Math

- What DOES it take to be the best teacher for your child?
- 40% of what a child learns depends on you.
 - Acquire language
 - Feed and dress themselves
 - Learn colors, shapes, and sounds
 - Providing the opportunity to learn

Teaching Math

- Science of teaching math –
newer research on how children learn
- Art of teaching math –
each child is different
requires tweaking lessons to help each
individual child

Teaching Math

- Mental development depends on an opportunity to learn.
- Complex activities create significant brain development.
- Research finds the same development does not happen with rote learning.
- Intelligence is not fixed.
- Intelligence is increased by learning!

Teaching Math

“What you have been obliged to discover by yourself leaves a path in your mind which you can use again when the need arises.”

– G.C.Lichtenberg,
professor of physics,
1742–1799

Great Math Teachers

- Watch their attitude about math.
- Nurture a strong number sense.
- Allow time for thinking.
- Foster self-confidence and independent thinking.
- Provide games and puzzles.
- Encourage hard work and growth mindset.
- Choose a good math curriculum.

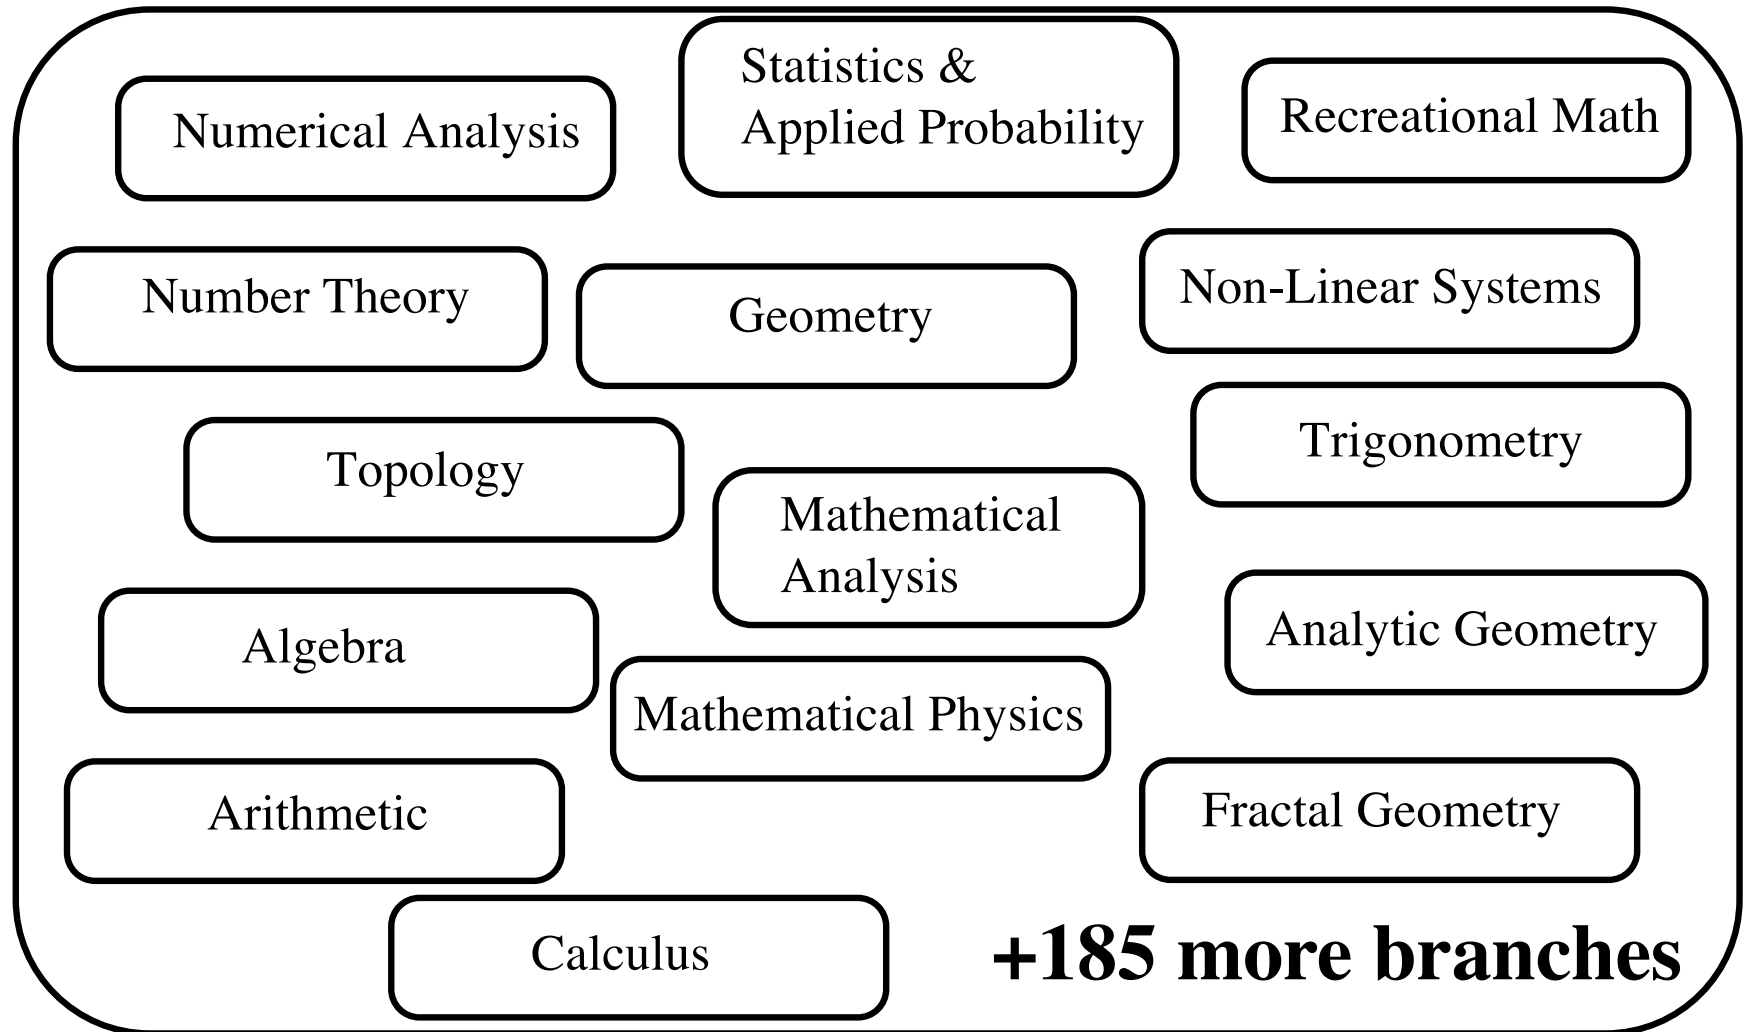

Attitude about Math

- Never tell your children that you are “bad” at math.
- Or that you dislike math.
- Especially mothers to daughters.
- Research shows that as soon as a mother shares her negative ideas with her daughter, the daughter’s achievements go down.
- The same does not hold true with sons.

Attitude about Math

- Math education will depend on what the teacher believes, knows, and does.
- Believe in the importance of math for daily, living, future careers, and understanding of our world.
- Know that the “math brain” is a myth.
- Radiate joy for math and help your child develop a love of math.

Attitude about Math

Great Math Teachers

- Watch their attitude about math.
- **Nurture a strong number sense.**
- Allow time for thinking.
- Foster self-confidence and independent thinking.
- Provide games and puzzles.
- Encourage hard work and growth mindset.
- Choose a good math curriculum.

Number Sense

- If you don't have an image in your mind, the word has no meaning.
- Think of foreign languages.
- Therefore, you have to “see” a quantity in your mind in order to attach the word.

Quantities

Quantities

Adding Quantities

$$4 + 3 =$$

Adding Quantities

$$4 + 3 = 7$$

Adding by Counting From a Child's Perspective

Because we're so familiar with 1, 2, 3,
we'll use letters.

A = 1

B = 2

C = 3

D = 4

E = 5, and so forth

Adding by Counting From a Child's Perspective

$$\begin{array}{r} F \\ + E \\ \hline \end{array}$$

Adding by Counting From a Child's Perspective

$$\begin{array}{r} F \\ + \underline{E} \end{array}$$

Adding by Counting From a Child's Perspective

$$\begin{array}{r} F \\ + E \\ \hline K \end{array}$$

Adding by Counting

From a Child's Perspective

Now Memorize the Facts!!

$$\begin{array}{r} E \\ + I \\ \hline \end{array}$$

$$\begin{array}{r} G \\ + D \\ \hline \end{array}$$

$$\begin{array}{r} H \\ + F \\ \hline \end{array}$$

$$\begin{array}{r} D \\ + C \\ \hline \end{array}$$

$$\begin{array}{r} C \\ + G \\ \hline \end{array}$$

Place Value

From a Child's Perspective

L

is written **AB**

because it is **A J**

and **B A'** s

huh?

Place Value

From a Child's Perspective

L (twelve)

is written **AB** (12)

because it is **A J** (one 10)

and **B A'** s (two 1s)

Place Value

From a Child's Perspective

Children often think of 14
as 14 ones,
not ten and 4 ones.

The pattern that is needed to make
sense of tens and ones is hidden in
the English language!

Transparent Place Value

2-ten

Transparent Place Value

3-ten

Transparent Place Value

3-ten 6

Transparent Number Naming

$$10 = \text{ten}$$

$$11 = \text{ten } 1$$

$$12 = \text{ten } 2$$

$$13 = \text{ten } 3$$

$$14 = \text{ten } 4$$

...

$$19 = \text{ten } 9$$

$$20 = 2\text{-ten}$$

$$21 = 2\text{-ten } 1$$

$$22 = 2\text{-ten } 2$$

$$23 = 2\text{-ten } 3$$

...

...

$$99 = 9\text{-ten } 9$$

Transparent Number Naming

- Use this for two reasons:
 1. Patterning

Transparent Number Naming

- Just as reciting the alphabet doesn't teach reading, counting doesn't teach arithmetic.
- Just as we first teach the *sound* of the letters, we first teach the *name* of the quantity with transparent number naming.

Transparent Number Naming

- Asian children learn mathematics using the math way of number naming.
- They understand place value in first grade; only half of U.S. children understand place value at the end of fourth grade.

Transparent Number Naming

- Asian children learn mathematics using the math way of number naming.
- They understand place value in first grade; only half of U.S. children understand place value at the end of fourth grade.
- Mathematics is the science of patterns. The patterned math way of number naming greatly helps children learn number sense.

Transparent Number Naming

- Use this for two reasons:
 1. Patterning
 2. Place value
- Then teach traditional names
- No “random” recital of the numbers 10 to 100.
- Gives order and clarity to numbers.
- Makes place value a natural part of numbers.

Great Math Teachers

- Watch their attitude about math.
- Nurture a strong number sense.
- **Allow time for thinking.**
- Foster self-confidence and independent thinking.
- Provide games and puzzles.
- Encourage hard work and growth mindset.
- Choose a good math curriculum.

Time for Thinking

“I have never committed math facts to memory, although I can quickly produce any math fact, as I have number sense and I have learned good ways to think about number combinations.

My lack of memorization has never held me back at any time or place in my life, even though I am a mathematics professor.”

– Jo Boaler,
author and professor at
Stanford University

Time for Thinking

- A fact is considered to be known if it can be recalled in two or three seconds.
- Gives time to visualize, then produce the fact.
- Visual strategies help learn the facts.

Strategies

- A strategy is a way to learn a new fact or recall a forgotten fact.
- A visual representation is a powerful strategy.

Strategy: Complete the Ten

$$9 + 5 =$$

Strategy: Complete the Ten

$$9 + 5 = 14$$

Strategy: Complete the Ten

$$9 + 7 =$$

Strategy: Complete the Ten

$$9 + 7 = 16$$

Strategy: Two Fives

$$8 + 6 =$$

Strategy: Two Fives

$$8 + 6 = 10 + 4 = 14$$

Strategy: Two Fives

$$7 + 5 =$$

Strategy: Two Fives

$$7 + 5 = 10 + 2 = 12$$

Strategy: Part from Ten

$$15 - 9 =$$

Subtract 5,
then 4

Strategy: Part from Ten

$$15 - 9 = 6$$

Subtract 5,
then 4

Strategy: All from Ten

$$15 - 9 =$$

Subtract 9
from the 10

Strategy: All from Ten

$$15 - 9 = 6$$

Subtract 9
from the 10

Strategy: Going Up

$$15 - 9 =$$

Start at 9;
go up to 15

Strategy: Going Up

$$15 - 9 = 6$$

Start at 9;
go up to 15

Time for Thinking

- A fact is considered to be known if it can be recalled in two or three seconds.
- Gives time to visualize, then produce the fact.
- Visual strategies help learn the facts.
- Rely on number sense.
- Avoid flashcards, speed drills, and timed tests as these create anxiety, especially with girls.

Great Math Teachers

- Watch their attitude about math.
- Nurture a strong number sense.
- Allow time for thinking.
- **Foster self-confidence and independent thinking.**
- Provide games and puzzles.
- Encourage hard work and growth mindset.
- Choose a good math curriculum.

Foster Confidence

- Be encouraging.
- Realize that there is more than one way to do calculations – some more efficient than others.
- Not everything needs to be written down.
- Ask the child to explain their logic.
- Help them identify where errors were made so that they can avoid them in the future.

Foster Confidence

- Remember mastery is achieved through thinking, not blindly following an example.
- Mastery is not practicing some rule over and over and over.
- Mastery is a continuing process.
- Some frustration is a normal part of learning.
- Develop concentration by being allowed to concentrate without interruptions.

Great Math Teachers

- Watch their attitude about math.
- Nurture a strong number sense.
- Allow time for thinking.
- Foster self-confidence and independent thinking.
- **Provide games and puzzles.**
- Encourage hard work and growth mindset.
- Choose a good math curriculum.

Play Games

Play Games

$$\frac{\text{Games}}{\text{Math}} = \frac{\text{Books}}{\text{Reading}}$$

Games provide interesting repetition needed for automatic responses.

More importantly, games provide an application for the new information!

Go to the Dump Game

A “Go Fish” type of game where the pairs are:

1 & 9
2 & 8
3 & 7
4 & 6
5 & 5

Ring Around the Products

- Game to review the multiplication facts.
- Goal is to collect the most cards.

Ring Around the Products

2	6	3	5	1
8	54	12	42	7
5	50	15	9	8
9	1	6	8	3

Ring Around the Products

2		3	5	1
8		12	42	7
5	50	15	9	8
	1	6	8	3

6	9	54
---	---	----

Great Math Teachers

- Watch their attitude about math.
- Nurture a strong number sense.
- Allow time for thinking.
- Foster self-confidence and independent thinking.
- Provide games and puzzles.
- **Encourage hard work and growth mindset.**
- Choose a good math curriculum.

Hard Work and Growth

- Encourage the child to persist, learn, and grow.
- Do not constantly dispense rewards, verbal or otherwise.
 - This causes the child to rely on you for assurance.
 - Need to learn to rely on their own thinking each step of the way.

Hard Work and Growth

“All progress takes place
outside the comfort zone.”

– Michael Bobak,
digital artist

Great Math Teachers

- Watch their attitude about math.
- Nurture a strong number sense.
- Allow time for thinking.
- Foster self-confidence and independent thinking.
- Provide games and puzzles.
- Encourage hard work and growth mindset.
- **Choose a good math curriculum.**

Good Math Curriculum

- Look at the authors' credentials.
- Look at their philosophy of teaching math.
 - Based on understanding?
 - Incorporate manipulatives?
 - Include real-life application?
- Look at the objectives – what is being taught?
- Is it more than just arithmetic?
- Are you actively involved in the teaching?

Conclusion

- Each time a child discovers the beauty of math, a region of the brain lights up.
- This is the same region of the brain that lights up when an artist finds beauty in art.
- Help your child find the beauty in math!
- Bonnie, age 13, learning about the Golden Ratio said: “It’s just one of these things in life that make you feel satisfied to know.”

Conclusion

“You cannot love what you do not know.”

– David McCullough, author

– Ben, math student,
learning to draw
tangent arcs
